

## BENEFITS

- ▶ **Modular concept**
- ▶ **Lightweight Kevlar-shell**
- ▶ **Sealed visor (no goggles needed)**
- ▶ **Exchangeable lining in different sizes**
- ▶ **Increased impact protection by hard mask cover**
- ▶ **Mountable cold protection for the neck**
- ▶ **Optional training light module**
- ▶ **Optional navigation module**
- ▶ **Integral night-vision goggles holder**
- ▶ **CFD optimized aerodynamics**
- ▶ **Version for wearers of corrective glasses**
- ▶ **Adaptable to customer requirements**
- ▶ **Ready for ballistic protection**

GH-1 is a highly advanced parachutist helmet for HAHO/HALO operations. It is part of the “GRYPHON” project, a fixed wing based tactical gliding system for superior range parachute penetration missions.

As a totally new development it is not a modified jethelmet or helicopterhelmet. The GH-1 is a fully modular concept. It can be used in different configurations, e.g. with or without oxygen, training light modul, navigation modul, night-vision goggles etc.

Due to total integration of CAD-CAM with rapid prototyping the GH-1 can be fast and easily adapted to special needs and wishes of the potential customer like new housings for different oxygenmasks or other holders for different night-vision goggles etc.

## Special Parachute Equipment and Logistics Consortium GbR

Headquarter:  
Livry-Gargan-Strasse 6  
82256 Fuerstenfeldbruck, Germany  
Phone: +49 89 9216-2485
